

Registering PocketWeb

Once you have installed PocketWeb on your phone and accepted the terms of use (<http://www.tlogic.de/terms>), it is necessary to **register your copy** by entering an **unlock key**. You may either get a limited trial key or purchase a full key on <http://www.tlogic.de/pocketweb>.

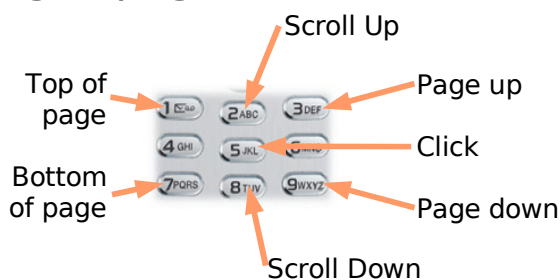

To register, please:

- ➔ Start PocketWeb and invoke the menu. (If you do not know how to invoke the menu, learn more on the next page.)
- ➔ Choose **Unlock Key** → **Enter Key**.
- ➔ In the appearing text box, enter the key and confirm by selecting **Ok**.

The Screen

Moving in page

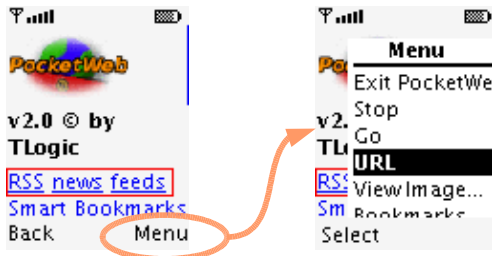

- ➔ For scrolling up and down, you can also use your phone's built-in joystick
- ➔ To click, you can also press the joy stick or select **Go** from the menu

More key commands

[*] Enter URL
[6] Bookmarks
[#] Browsing history

[4] Return to previous page
[0] Interrupt loading process

Invoking the Menu

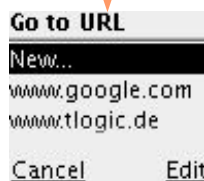

Most of PocketWeb's functionality is accessed through the menu.

The menu is invoked via the buttons right and left just below your phone's screen. The menu button is usually labeled '**Menu**', '**Options**', or '**More**', depending on your particular device.

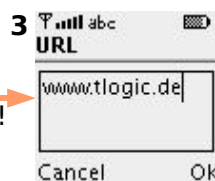

Go to URL

1 Select **URL** from the menu or press **[*]**

2 Enter new URL, or use previous URLs

Click!

Ok

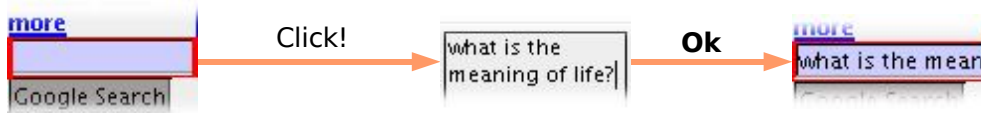

More Browsing Options

- ➔ Select **Back** from the menu, press your phone's back button, or hit **[4]** to return to the previous page
- ➔ Select **Stop** from the menu or hit the **[0]** key to interrupt loading process
- ➔ Select **Reload** from the menu to load the current page again
- ➔ Hit **[#]** to view the history

Filling in Forms

Input Elements in forms must be clicked in order to be manipulated.

➔ Click text boxes to enter text.

➔ Click selection boxes to select an option

➔ Click check boxes to check or un-check.

Bookmarks

PocketWeb provides two different kinds of bookmarks:

- **Local bookmarks** are edited and stored locally on your mobile phone. These bookmarks support only two default folders (My WebPages and My NewsFeeds).
- **SmartBookmarks** are stored in your personal account on the TLogic server. They support elaborate folder management and including the possibility to import your desktop PC bookmarks, but cannot be edited from PocketWeb. For more information, please visit <http://www.tlogic.de/pocketweb>.

Select **Bookmarks** from the menu or hit **[6]**

The screenshot shows a menu titled 'Bookmarks' with the following items: 'Add Bookmark', 'My WebPages...', 'My NewsFeeds...', a separator line '-----', and 'SmartBookmarks'. Brackets on the left group 'Add Bookmark', 'My WebPages...', and 'My NewsFeeds...' under 'Local Bookmarks', and 'SmartBookmarks' under 'SmartBookmarks'. An orange arrow points from the text above to the 'Bookmarks' menu header.

Local Bookmarks

Add Bookmark: The current page is added to My WebPages or My NewsFeeds, depending on what content you are viewing

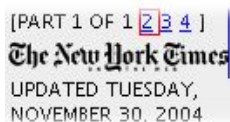

My WebPages: Go to a bookmarked page or edit MyWebPages

My NewsFeeds: Go to a bookmarked RSS feed or edit My NewsFeeds

SmartBookmarks

Please visit <http://www.tlogic.de/pocketweb> for more information.

Page Partitioning

Large pages are split into smaller pieces. At the top of the page, you will see links for browsing the page parts. At the bottom, there is a link to the next part.

You can customize or turn off page partitioning in the menu **Settings** → **Page partitioning**.

Save/Load Pages

With PocketWeb you can store pages in the phone's memory and view them later without making another internet connection. To save the currently visible page, select **Extras** → **Save Page** from the menu. Saved pages can be accessed via **Extras** → **Load Page**.

Images are excluded from saving and appear *[like this]* when viewing a saved page. For viewing the image, select **Load Image...** from the menu (a new internet connection will be established)

Menu Overview

Access to menu commands varies by phone model. Often, the menu is invoked by pressing the button labeled 'Menu', 'Options', or 'More'.

URL Enter a web address or use a previously entered address.

Back Go to previous page. You can as well go back by pressing your phone's back-button. Going back does not necessarily load the previous page again from the internet. Already viewed pages are stored in the phones cache and are retrieved from there. You can adjust how many pages should be kept in cache in the menu Settings->Cache size. A larger cache size requires more memory on your phone.

Stop Interrupt page loading. Stops loading text or images immediately. Note: Does not work while "waiting for reply".

Load Image... Manually load image (necessary only if images do not load automatically, see Settings->Images). You are prompted to select an image from the current screen, or to choose loading all images currently visible on the screen.

Bookmarks

Add Bookmark Add the current page to My WebPages or My NewsFeeds, depending on what content you are viewing.

My WebPages Go to a bookmarked page or edit MyWebPages

My NewsFeeds Go to a bookmarked RSS feed or edit My NewsFeeds.

SmartBookmarks Access your SmartBookmarks account. For more information, please visit <http://www.tlogic.de/pocketweb>.

Find in page Search for a phrase in current page starting from the cursor. If found, the page will be scrolled down to the hit.

Reload Load current page again. Important if errors occurred during loading.

Settings Program settings (see next page).

Unlock key

Enter Key Enter a registration key to unlock the program. Uppercase or lowercase does not matter when entering the key.

Key status Check the current status of your unlock key

Help The same as clicking on "Short manual" in the start screen.

Extras

Save current page Save current page to phone (only text is saved)

Load page... Load a page from phone or delete saved pages.

Browse history View current session's history. Pages which are still in the phone's cache are marked by a "*". The history can also be invoked conveniently by pressing #.

About/Terms Version, copyright, and terms of use.

Exit PocketWeb Exit program. The program will save its settings and, after a few seconds, return to the point where you started it.

Settings

PocketWeb is largely customizable to your own preferences. For changing the settings, choose **Settings** from the menu.

Images

Auto-load Images Decide if images should be automatically loaded. If off, images will be appear *[like this]*, and can be loaded manually afterwards by selecting **Load image...**

Colors Choose color resolution. Lower values don't look so good, but result in less traffic, faster download, and less memory consumption

Restrictions Choose whether unimportant images should be ignored. Images without an 'alt'-description attribute are considered to be unimportant. The default is "ignore unimportant".

Cache configure the size of the image cache. On phones with low memory, it may be necessary to turn the cache off.

Font Size Choose between small and large font size

Page Partitioning PocketWeb downloads pages in smaller pieces. Define here how large these pieces are, or turn page partitioning off. Lower values result in more pieces per page but less memory consumption.

Cookies

Accept Policy Choose if you want to accept or reject cookies, or if you like to be asked for each cookie.

Edit Cookies View the cookies currently stored on your phone and delete single cookies at your option.

Cache size PocketWeb caches pages, so previously visited pages can be viewed without downloading them again from the internet. Here, you can adjust the cache size. On some phones with low memory it may be necessary to turn the cache entirely off.

Forms Configure whether PocketWeb remembers previous form entries. When set to "Remb. (no passwords)", PocketWeb remembers all entries except for passwords.

SSL Connections Configure whether PocketWeb is allowed to access SSL-encrypted sites. **WARNING:** Data sent between your device and the TLogic server is always transmitted unencrypted! Do not transmit confidential like bank passwords or credit card information! A warning message will remind you of this fact when accessing an encrypted site the first time in each session.

Clear History Clears the URL history.

Hints

On many phones you can configure data compression in your GPRS settings. Turn 'data compression' and 'header compression' on for minimum GPRS transfer.
